

Delta –M- Polishing Compound

Characteristics:

Delta –M- is a new developed and universal drum polishing concentrate. It is more than 90% biodegradable and causes no problems during waste water treatment. The life time, in comparison to other polishing agents, has been extended by factor 5. It can be used in drums and for vibrators.

Further advantages:

Polishing of all kind of metal, e.g. gold and silver, all non-precious metals (brass, new-silver and copper) as well as tin and aluminium.

It can be used with stainless steel balls and for normal iron balls because of a special ball protecting agent.

Thanks to the universal application it is no longer necessary to use several polishing agents or to mix them.

Concentration:

5 to 20 cm³ per 1 l
