

## Delta –SG- Drum polishing concentrate

### **Characteristics**

Delta –SG- is a universal drum polishing concentrate. It is over 95% biodegradable and causes no problems during waste water treatment. It can be used in polishing barrels and vibrators.

### **Further advantages:**

Polishing of all sorts of metals like gold and silver, all non-ferrous metals (brass, new silver, copper) as well as tin and aluminium.

It can be used for jewellery items, technical products, spectacle frame parts and mass production goods.

Stainless steel or normal iron balls can be used thanks to a special ball protecting agent. Also a hand protecting agent has been added.

Thanks to the universal application it is no longer necessary to use several polishing agents or to mix them.

### **Concentration:**

20 to 30ml per 1l barrel volume
